POWER BI PROJECT

Student Academic Performance Analysis

Attendance, marks and results across departments, subjects and semesters

Presented by **Pratishtha Jaiswal**

Project overview

The goal: understand how students are performing and what drives their results.

Dataset fields

- Student ID, department, semester, subject
- Attendance %, assignment and exam marks
- Overall score and pass / fail result

50
Students

3
Departments
BBA · BCA · B.Com

5
Subjects

3
Semesters
2, 3 and 4

Headline numbers at a glance

50

Total students

65.6

Average overall score

98%

Pass rate (49 of 50)

1

Failed student

89.2

Highest score (STU038)

75.9%

Average attendance

Calculated in Power BI with DAX measures: Pass %, Highest Marks and Failed Students.

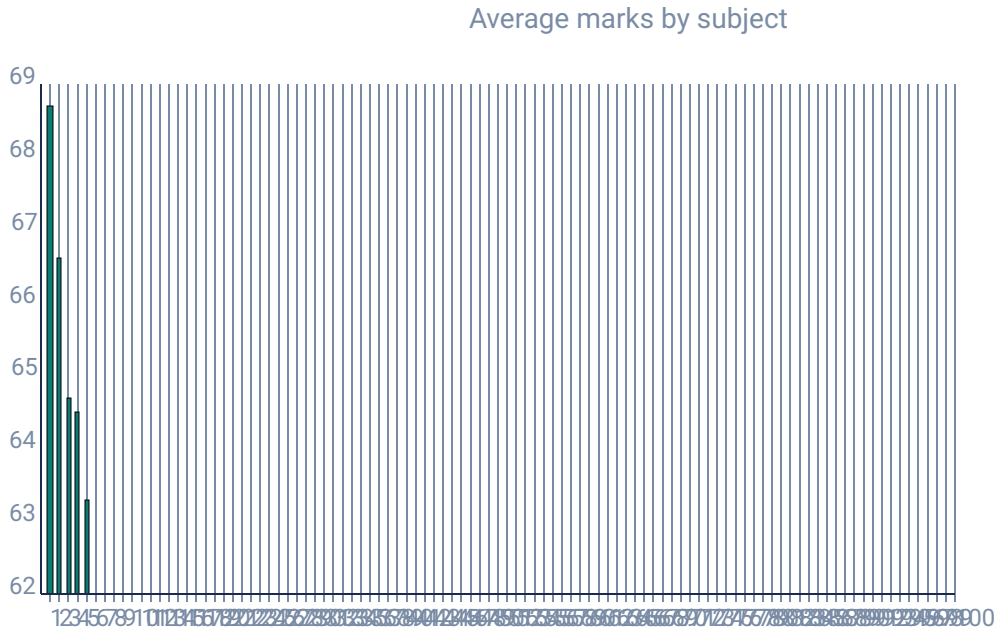
B.Com leads, BBA trails slightly

B.Com averages 67.1, the highest of the three departments.

BBA averages 63.8, about 3 points lower.

BBA also holds the only fail, so its pass rate is 94.1% against 100% for B.Com and BCA.

Management scores highest, Marketing lowest

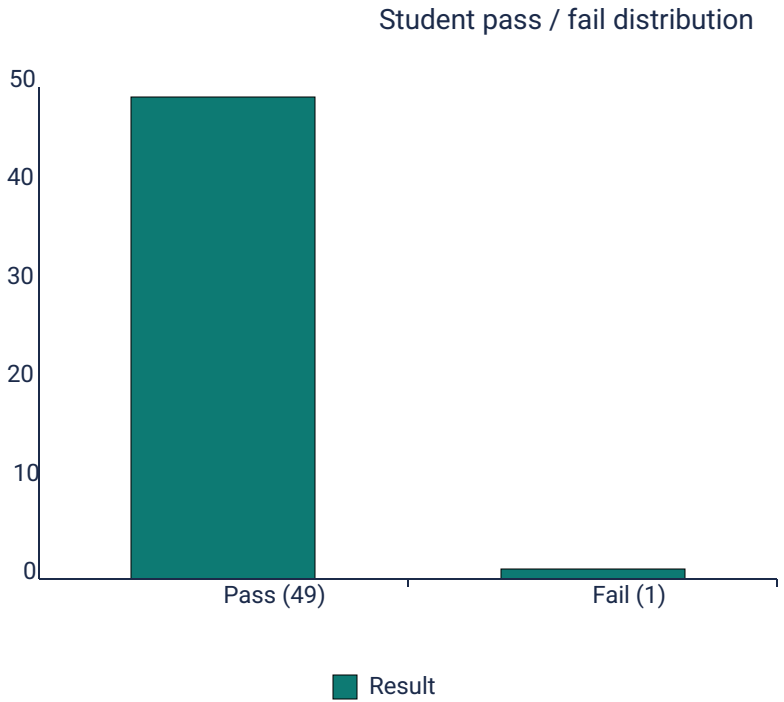


Each subject has 10 students, so the comparison is balanced.

The gap between best and worst subject is 5.4 points.

Business Analytics is the only subject with a failed student (90% pass rate).

Almost every student passes



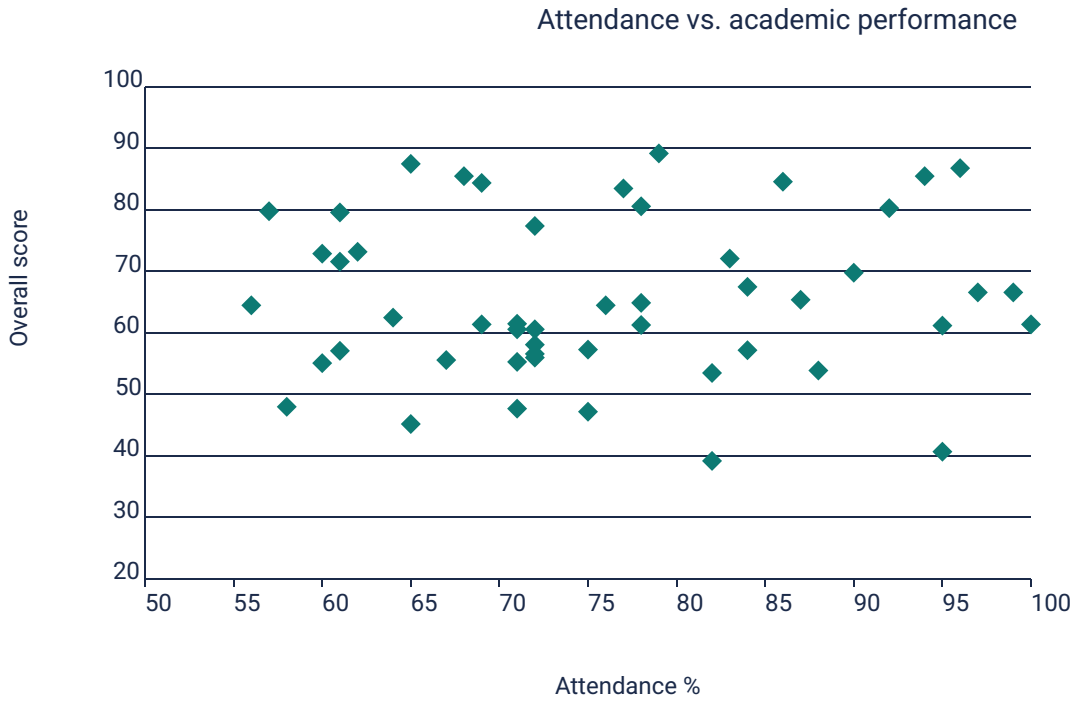
98%

49 of 50 students passed

The one fail: STU004

BBA, Business Analytics, semester 2. Score 39.2, with 82% attendance, so absence does not explain it.

Attendance alone does not predict scores



Correlation

0.05

Essentially none: high and low attendance students score similarly.

Exam marks are the stronger driver, correlating 0.93 with overall score.

Key takeaways

1	**Strong overall results**	98% pass rate and an average score of 65.6 across 50 students.
2	**Small gaps between groups**	Departments differ by 3.3 points and subjects by 5.4, with BBA and Marketing at the lower end.
3	**Exams matter most**	Exam marks track overall score closely, so exam preparation support has the biggest payoff.
4	**Look beyond attendance**	Attendance showed no link to scores here; pair it with engagement data for a fuller picture.

Note: based on a sample of 50 students, so treat differences as indicative.

Thank you

Questions and feedback are welcome
